

Skelly's Stowe House Keyless Entry

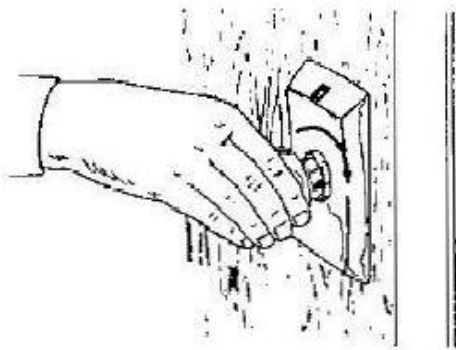

Your Door Lock Code for the week of _____ is:

Turn Knob Right to: _____ Then Left to: _____ Then back Right to: _____

Quick Overview

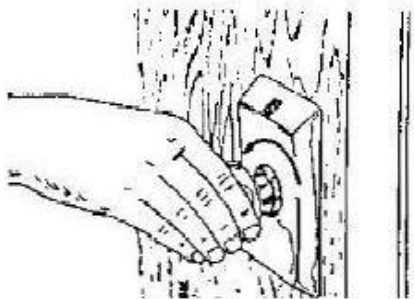

How to Enter Code Digits

Your IntelLock operates like a combination lock. The following shows how easily code numbers are entered.

When the knob is turned slightly to the right, the numbers count upward from 0: 0,1,2, (Fig 1).

When the knob is turned slightly to the left, the numbers count downward from 0: 0,9,8, (fig. 2).

Turn and hold the knob in either direction until the display shows the first digit of your code, then release the knob. Do not release the knob until the display shows the first digit of your code.

Before the display turns off, turn and hold the knob in either direction until the display shows the second digit of your code, then release the knob. Do not release the knob until the display shows the second digit of your code.

Repeat this process for the remaining digits in your code.

After entering the last digit of your code, the display will show a flashing "U" to indicate the door is unlocked.
